

## Where Custom is Standard

Building a box isn't hard; but building it just right requires a special approach. At Robinson, custom has been the standard long before we officially grew into Robinson Custom Enclosures. It's the way we've treated our custom metal fabrication customers for over 30 years. And it's what makes a difference in our enclosures, packages and tanks today.

Our roots are in the custom business – we're a division of Robinson Metal, a progressive custom sheet metal fabricator committed to constant technological improvement, skilled craftsmanship, and dedication to a belief in the importance of outstanding customer service. Unlike most enclosure manufacturers, we founded our new division for the sole purpose of building custom enclosures in 1995.

When we say "custom is standard" at Robinson, we mean it – from the way we build our products to the way our dedicated teams approach every challenge with out-of-the-box thinking.

## Design

We begin each job by thinking outside the box – the best fit for the site, your weather protection and sound attenuating requirements. Then, we put our best ideas in the box.

All Robinson custom enclosures, tanks and trailers are designed by our highly-trained in-house design team. The group has extensive experience in designing weather-protective and sound attenuated enclosures.

## Fabrication

A well-built enclosure can make a huge difference in a safe, quality working environment for your people and in protection for your equipment. From the most intricate details to the most extensive projects, Robinson Custom Enclosures has the knowledge, capabilities and resources to get the job done right.

Our 125,000 square-foot facility is able to accommodate construction of even the largest and heaviest of enclosures. What's more, it's brimming with the latest high-tech metal fabrication equipment to handle your unique needs.

## Packages

As we like to say, "the proof is in the package." In addition to offering extensive design and fabrication services, we can put it all together for you in a complete package ranging from 20 kw to 2,800 kw gen-sets.

Our packaging services include custom turnkey packages, enclosures packaged around your generator and accessories, skid mounting, trailer mounting and more. Robinson's team will work closely with you to offer creative solutions to your unique needs.

WHERE CUSTOM IS STANDARD

## Custom Equipment Trailers (Single, Tandem & Triple-Axle)

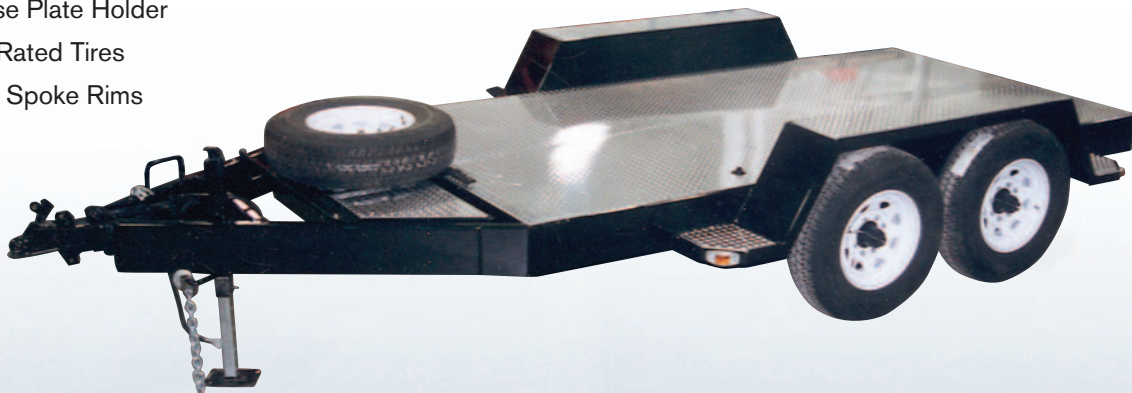

Robinson Custom Enclosures can get your equipment needs moving in the right direction. We specialize in the production of standard and custom built, heavy-duty equipment trailers. We also produce skids and single or double walled, in-frame fuel tanks.

Our commitment is to provide high quality equipment trailers, designed to your specifications, at an affordable price. Upon review of your prints, we will build the generator trailer of your choice from start to finish. All work is done in-house without outsourcing.

Please review standard features below. Optional features can be included on each unit. Call us for more product details

## Custom Enclosures

To most people, an enclosure may be just a box, but at Robinson Custom Enclosures, we know that small details can make a big difference in the life of the enclosure, your equipment, and in the safety and quality of working conditions for your people. We make sure that the design and construction closely fit the environment.

We maintain control over the complete process from design through delivery to make sure the enclosure is built to your exact specifications. Our capabilities include:

- Drop over of skid base style
- Custom turnkey packages
- Enclosures packaged around your equipment and accessories
- Aluminum, stainless steel, or galvanealed construction
- Skid mounting
- Trailer mounting
- Weather protection
- IBC-certified designs
- ISO Container packages
